

Angular and TypeScript

It is much easier to write Angular with TypeScript.

Sample

A sample ts class with decoration:

```
1 import {bootstrap} from 'angular';
2 @component({
3   selector: 'app'
4 });
5 class App {}
```

The corresponding html

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>example</title>
5 </head>
6 <body>
7   <app [prop]='data'></app>
8 </body>
9 </html>
```

The corresponding css:

```
1 .app {
2   display: block;
3 }
```
